MIT Press Ltd, United States, 2016. Hardback. Book Condition: New. 229 x 178 mm. Language: English . Brand New Book. What has planetary-scale computation done to our geopolitical realities? It takes different forms at different scales -- from energy and mineral sourcing and subterranean cloud infrastructure to urban software and massive universal addressing systems; from interfaces drawn by the augmentation of the hand and eye to users identified by self -- quantification and the arrival of legions of sensors, algorithms, and robots. Together, how do these distort and deform modern political geographies and produce new territories in their own image? In *The Stack*, Benjamin Bratton proposes that these different genres of computation -- smart grids, cloud platforms, mobile apps, smart cities, the Internet of Things, automation -- can be seen not as so many species evolving on their own, but as forming a coherent whole: an accidental megastructure called *The Stack* that is both a computational apparatus and a new governing architecture. We are inside *The Stack* and it is inside of us. In an account that is both theoretical and technical, drawing on political philosophy, architectural theory, and software studies, Bratton explores six layers of *The Stack*: Earth, Cloud, City, Address, Interface, User. Each is mapped on its own terms and understood as a component within the larger whole built from hard and soft systems intermingling -- not only computational forms but also social, human, and physical forces. This model, informed by the logic of the multilayered structure of protocol stacks, in which network technologies operate within a modular and vertical order, offers a comprehensive image of our emerging infrastructure and a platform for its ongoing reinvention. *The Stack* is an interdisciplinary design brief for a new geopolitics that works with and for planetary-scale computation. Interweaving the continental, urban,...
